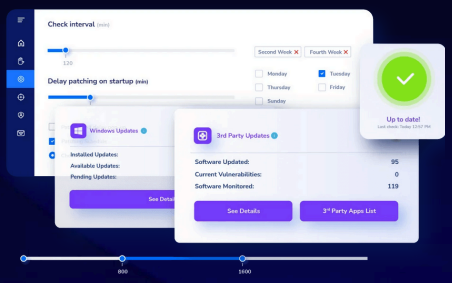
Patch and Asset Management

Heimdal®

Why Heimdal?

Heimdal offers an end-to-end, proactive, unified cybersecurity suite built to defend against next-gen threats.
The unique, multi-layered approach provides comprehensive protection across all areas. Through Heimdal, you can experience advanced protection across your organisation, from endpoints and networks to emails and beyond.



The challenges Heimdal's Patch and Asset Management solves

Vulnerability management is an ongoing challenge, technology continually changes and to ensure your business remains secure it's important to stay on top of patch and asset management. Challenges you can face when managing this yourself can range from lack of endpoint visibility to having an array of different systems and applications to update and manage.
Heimdal's Patch and Asset Management modernises patch management across any business through one powerful platform that provides full visibility of your software inventory. A proactive solution, the fully customisable Patch Management solution supports over 200 third party applications such as Chrome and Adobe.
Patching or updating schedules can be designed around your needs or can be fully automated.
No matter the plan, you'll have full visibility of software inventory, access to reports to demonstrate compliance, the ability to update of backdate software of OS, uninstall software, allow approved software is to be installed by users and set times for when you want updates to take place.

Benefits of Heimdal's Patch Management

Heimdal's Patch and Asset Management offers the following benefits:

Streamlined processes

Proactive automatic patch deployment simplifies patch management processes.

Enhanced productivity

Simple, stress-free management keeps your team in control, allowing them to focus on other key areas of your business.

Maximum security

Patches are deployed in under 4 hours – the shortest industry time for patch updates, and all packages are encrypted prior to delivery.

Time saving

Remove the need to manually patch software, reducing the amount of time your IT team spend on patch management.

Compliance

Ensure you're compliant with industry regulations including GDPR, CIS18, N1S2, Cyber Essentials and more.
