Keeper

Password management that protects your business

Keeper stores your passwords securely, keeping your business protected against password-related data breaches and cyberthreats.

Why Keeper?

Many businesses lack effective password management, leaving them vulnerable to cyberattacks.

Keeper is a secure and convenient way to protect your online accounts and other online assets.

It generates strong, random passwords, storing them securely in a personalised vault.

Challenges Keeper solves

Keeper makes password management simple. Easy to set up, with a simple design that can be used on any device, users can create high-strength, random passwords.

Keeper offers company-wide protection and eliminates the need for your team to remember or create their own passwords. Every user gets Keeper on unlimited devices and password sharing is completely secure. Using shared team folders, users can be given permissions to add, remove, change, or share records.

Benefits of Keeper

Easy to set up

Keeper is straightforward to set up and roll out to all users on every device.

Simple to use

A simple design that's easy to use, every user has their own private, encrypted vault.

Secure Sharing

High-strength, randomly generated passwords can be securely shared on demand.

Peace of Mind

Every employee gets Keeper on unlimited devices giving your business complete protection.

Threat Detection

Keeper scans vaults for passwords that have been exposed on the dark web and notifies users to take action.

Time Saving

Keeper instantly logs users into websites and apps by auto filling passwords, passkeys and 2FA codes.
