OCTIGA
Microsoft365 Security

Octiga makes Microsoft 365 more secure.

Octiga makes Microsoft 365 more secure. Microsoft 365 is a highly effective set of applications, enabling teams to collaborate from anywhere. The problem is that it leaves security gaps. These are hard to manage within Microsoft 365, but Octiga makes it automatic.

Why we partner with Octiga

Octiga delivers a complete security journey and gives us the confidence to deliver coherent Microsoft 365 security services to our customers.

Microsoft 365 is linked to all your important business data. Administering and monitoring Microsoft 365 security can be very complicated and time-consuming. If settings aren't configured properly you can expose your users and data to accidental leaks and malicious attacks.

The challenges Octiga solves

Octiga actively monitors for security incidents and events. When Microsoft 365 isn't configured correctly, it opens you up to threats. Octiga automatically checks for policies not configured correctly or accounts being compromised and instantly alerts you if it finds any problems.

Increasingly, companies are being targeted through a compromised account. Hackers create rules to intercept emails, hiding them from your view. However, with Octiga, if these rules have been created, Octiga will alert you and allow us to disable those rules directly.

How Octiga benefits your business

OCTIGA
Microsoft365 Security

Customisable security templates

We can customise and configure Octiga to meet the needs of your business.

Automated monitoring

Continuous monitoring searches for and quickly identifies suspicious activities.

Rapid alert-triage-remediate processes

Effortless triage and instant remediation saves the cost of breaches in seconds.

One-click remediation everywhere

Instant security across Entra ID groups, mailboxes, teams, SharePoint, and everything in Microsoft 365.

Continuous audits, gap analysis and reports.

Audits, analysis and reports identify and remediate security gaps.
