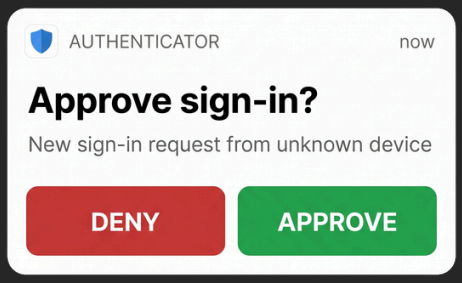
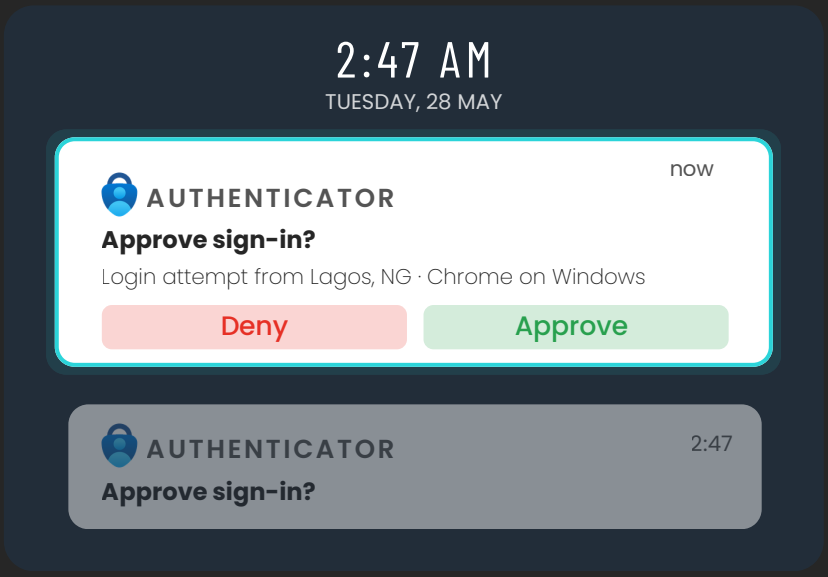
SECURITY ADVISORY • MFA FATIGUE AWARENESS

# Don't tap "Approve"
# It might be a scam.



## 01 ANATOMY OF AN MFA FATIGUE ATTACK



1. You didn't trigger it
2. Unfamiliar location
3. Repeated prompts
4. Different device
5. Unfamiliar app or service
6. Unusual timing

If you're not 100% sure, **don't act.**

## 02 HOW TO VERIFY IF IT'S A SCAM

***Did you just trigger a login yourself?***
If **NO**, the push notification is a scam by default. No exceptions.

**Tap "Deny."**
Never tap Approve to stop the notifications.

**Change your password immediately.**
Unprompted MFA notifications mean your password is compromised.

**Report it to your IT Provider right away.**
They can revoke active sessions.

**Switch to number matching or a hardware key.**
Number-matching and hardware keys can't be defeated by spamming.
